

## **ZADAR AIRPORT POLICY COMMITMENT TO EMISSIONS REDUCTION**

In recent decades, we have witnessed significant climate change, the consequences of which are felt in all parts of the world. The polar ice sheets are melting and the sea level is rising. In some regions, extreme weather and rainfall are increasingly occurring, while in others, more intense heat waves and droughts occur. These effects are expected to be even more intense in the coming decades.

Zadar Airport is proud to announce that it is making a commitment to reduce greenhouse gas emissions, reduce electricity consumption and implement energy – efficient solutions throughout the company's operations. Our plan is to systematically incorporate the environment and climate change aspect into consideration in all our activities, which will enable us to achieve our goal - become environmentally sustainable airport.

Zemunik Donji, 6<sup>th</sup> February 2020.
